

Climbing Stairs

Problem ID: climbingstairs

There is a staircase with N steps. At each move, you can climb either 1 or 2 steps. Count the number of unique ways to reach the top.

Input

The input consists of multiple lines:

- The first line contains an integer t ($1 \leq t \leq 100$), the number of test cases.
- Each of the next t lines contains an integer N ($1 \leq N \leq 50$), representing the number of steps in the staircase.

Output

For each test case, output the number of unique ways to reach the top.

Sample

Sample Input 1	Sample Output 1
2	5
4	8
